

LifeWood®

Micronized Copper Azole

EPP (Environmentally Preferable Product)
Highlights and Benefits

FIRST WOOD TREATMENT PROCESS TO RECEIVE EPP STATUS

The Koppers MicroPro® technology is the first treated wood process to be certified under Scientific Certification Systems Environmentally Preferable Product (EPP) program based on Life-Cycle Assessment.

REDUCED ENERGY USE

The Koppers MicroPro® treated wood process reduces total energy use by approximately 80% and greatly reduces greenhouse gas emissions.

LARGELY ELIMINATES COPPER RELEASES

Wood products treated with the Koppers MicroPro® process result in the release of 90% to 99% less copper into aquatic and terrestrial environments when compared to standard treated wood products. The very small amount released bonds readily to organic matter in the soil and becomes biologically inactive, thus effectively eliminating eco-toxic impacts.

MicroPro®/Lifewood products, as described in the ICC Evaluation Services, Inc. ESR-2240, meet all major model building code requirements

BETTER BRAND® COMMITMENT

Better Brand®'s pressure treated division is committed to bringing the highest quality treated lumber in class to the independent dealer network throughout the Northeast.

Since 1911 our parent company, Holbrook Lumber, has proudly serviced Independent Retail Lumber Yards and their customers with a full line of building products of distinction. Dealers who participate in our program are always assured of a Better Brand of treated lumber being shipped to them and their customers!

HISTORY OF QUALITY

Since 1965 We have been a certified wood treater and in 2014 we aligned with Koppers, the Global Leader in wood preservation and performance chemicals.

We utilize a proprietary grade of southern Yellow Pine from select mills we have relationships with for nearly 50 years and we treat our lumber with the most trusted name in wood preservation-Koppers.

REVOLUTIONARY TECHNOLOGY

Koppers MicroPro® technology is a revolutionary way to pressure treat wood. Koppers MicroPro® MCA pressure treated wood is treated with micronized copper azole preservatives, which help protect against termite damage, fungal decay and significantly improved corrosion performance.

Koppers MicroPro® technology is the first and only treated wood process to be EPP (Environmentally Preferable Product) certified by Scientific Certification Systems based on a Life-Cycle Assessment.

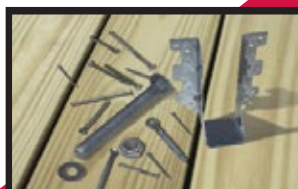

BETTER BRAND®

PRESSURE TREATED

Proprietary grade - 95% or better wane free
 Over 40 year relationships with the same mills
 Selected to the highest grading standard within grade class
 Better Brand SYP often includes higher grade lumber than its grade class
 Limited grading selection process yields higher appearance grade with every grading sort
 Better Brand treated lumber is infused with a state-of-the-art mold inhibitor & mildewcide
 Significantly improved corrosion protection for code approved fasteners
 Better Brand treated lumber is approved for aluminum contact

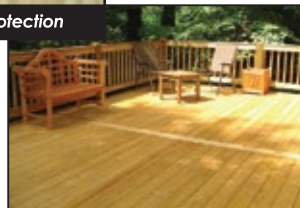

Better Brand® Dimension
Four Square Knot-Free Edges

Better Corrosion Protection

Wood treated with MicroPro® technology has numerous advantages over other treatment methods. The lighter color exudes a more natural looking appearance, greatly improving painting and staining qualities.

MicroPro® treated wood also exhibits better corrosion resistance for code approved fasteners and hardware, is ICC building code compliant and is approved for aluminum contact.

More Natural Appearance

Approved for Aluminum Contact

Better Brand® Premium

Better Brand® Premium Decking is a proprietary grade supplied by only the finest mills. Better Brand limits the grading selection process yielding a much higher appearance grade decking.

Industry Graded Premium decking allows for more lenient grading rules including more and larger face knots and edge wane.
